

BIOFLEX™ SOFTWARE

Smarter control. Better bioprocesses.

Discover an advanced software platform designed to simplify bioprocess monitoring, automation and data management.

From laboratory research to industrial applications, BioFlex™ brings process control, intelligent automation and real-time data visualization together in one flexible environment, helping you manage complex workflows with confidence.

Control with Confidence

Real-time monitoring and precise regulation of critical process parameters through intuitive control interfaces.

Automation Made Simple

Flexible recipes, advanced control strategies and automated sequences designed to streamline bioprocess operations.

Data-Driven Insights

Comprehensive data acquisition, visualization and analysis tools to support informed decisions and process optimization.

POWERFUL FEATURES. INTUITIVE CONTROL.

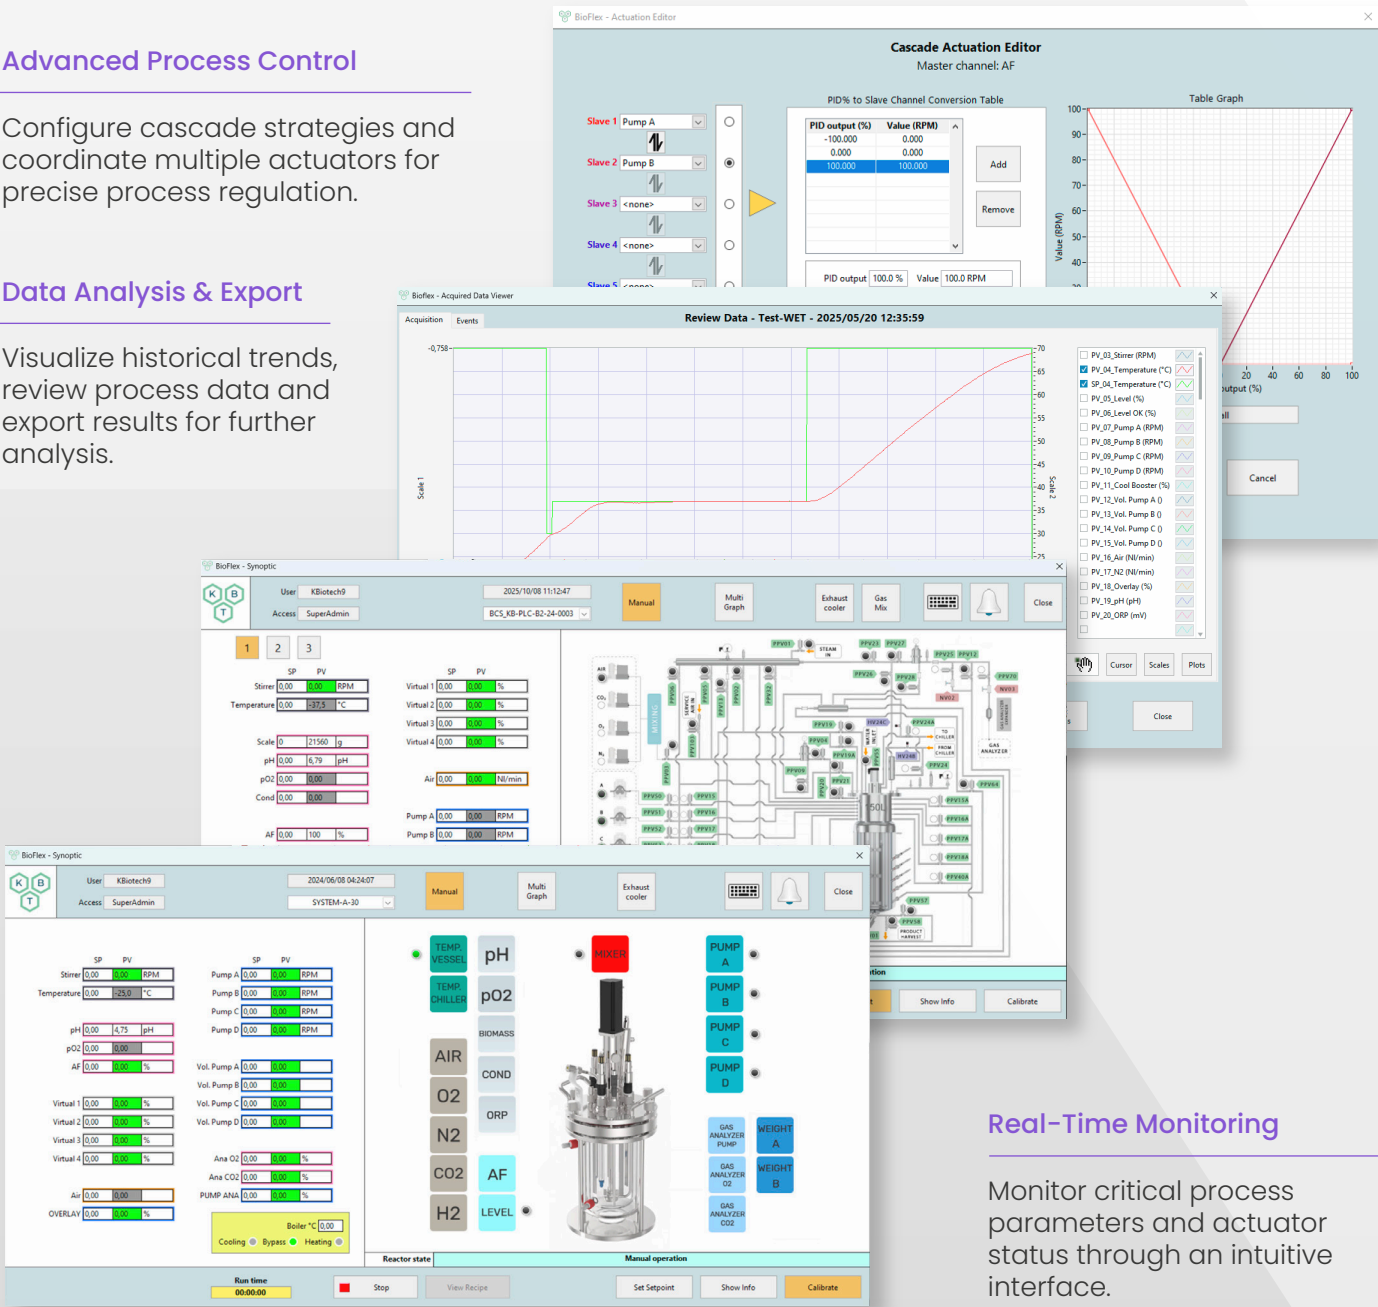

BioFlex™ combines intuitive visualization with advanced process automation, giving users complete control over every stage of their bioprocess. From real-time monitoring to complex control strategies and data analysis, all essential tools are brought together in one integrated environment.

Advanced Process Control

Configure cascade strategies and coordinate multiple actuators for precise process regulation.

Data Analysis & Export

Visualize historical trends, review process data and export results for further analysis.

Real-Time Monitoring

Monitor critical process parameters and actuator status through an intuitive interface.

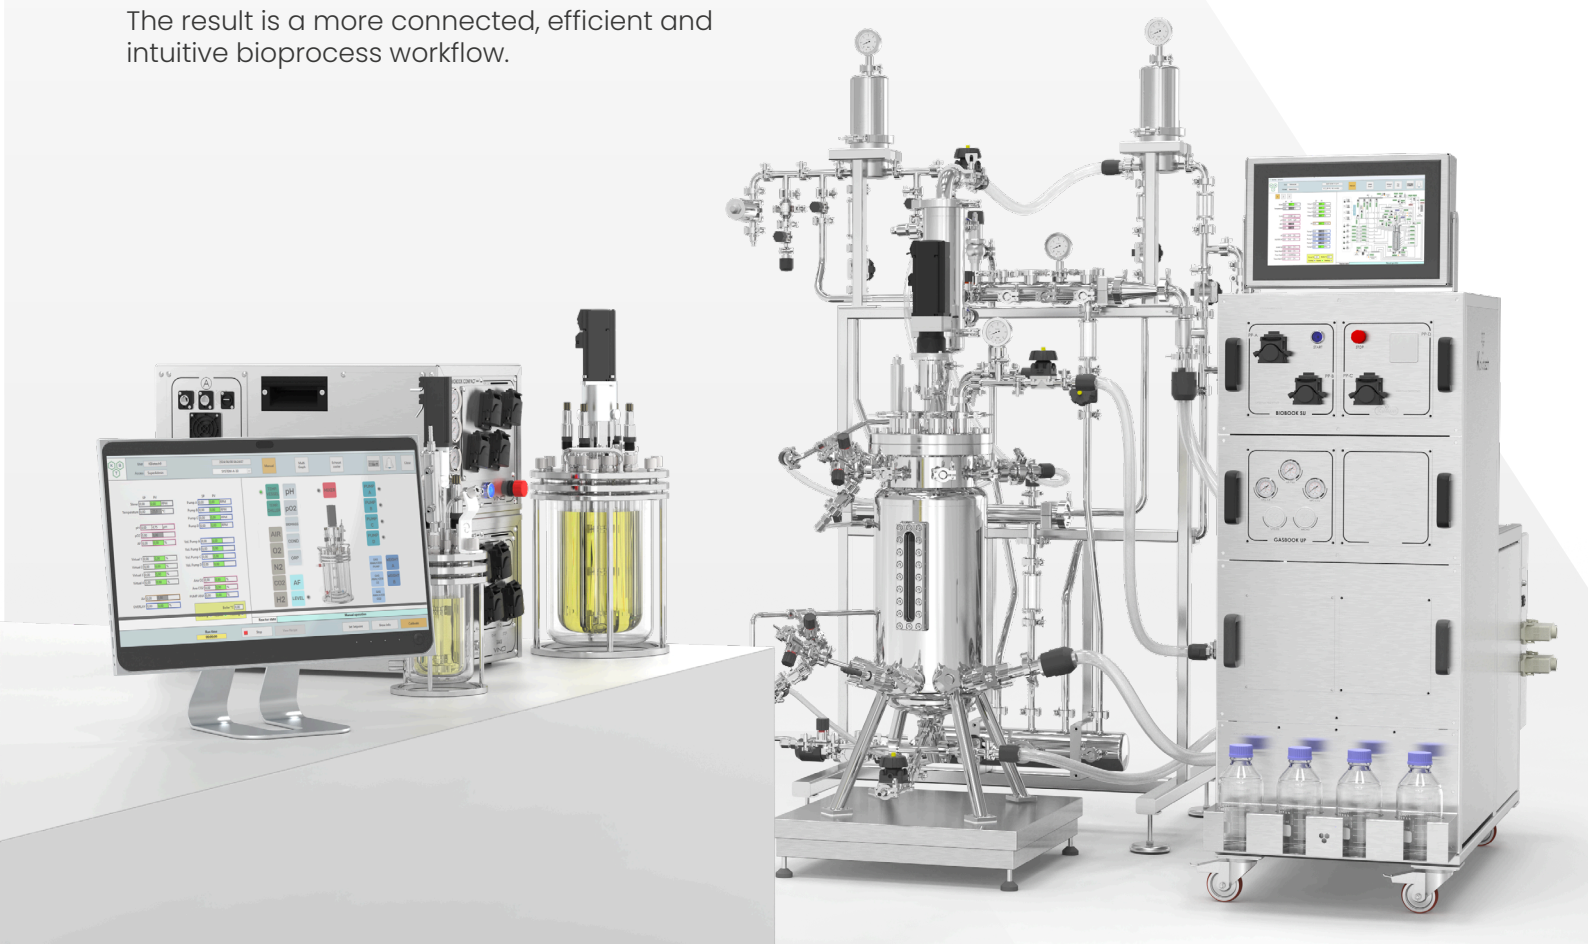

Intuitive Process Management

Adjust setpoints and manage essential bioreactor functions from a centralized control panel.

DESIGNED TO WORK TOGETHER

From software supervision to hardware integration, BioFlex™ brings Vinci bioreactors, controllers and process data together in one coordinated platform.

The result is a more connected, efficient and intuitive bioprocess workflow.

FLEXIBILITY AT EVERY LEVEL

From essential monitoring to advanced process automation.
